the smart edge

Network Sentry/Analytics Service Offering

Network Sentry/Analytics is a cloud-based service that analyzes long-term network access data to provide a unique perspective on bring-your-own-device (BYOD) trends.

Network Sentry/Analytics leverages data collected by your Network Sentry solution to delivers actionable reports that allow you to make informed decisions based on the connections being made to your network. By examining trends about devices, users, access points and duration, Network Sentry/Analytics helps you build a long-term BYOD strategy, plan for network capacity, profile user behavior and mitigate risk.

Getting Started

To kick off your Network Sentry/Analytics service, you will receive a welcome letter which includes a link to the Network Sentry/Analytics User Guide and your Work Order. The Work Order contains details of the services to be provided and the technical requirements for the configuration and operation of Network Sentry/Analytics in your environment.

First Work Session: Configuration and Discovery

A highly knowledgeable Bradford Networks' engineer will configure Network Sentry/Analytics for your network environment, and create your reporting account in Amazon. Network Sentry/Analytics will then go through its discovery process (typically 5 -7 days) to collect initial information about users, devices and hosts on your network.

Second Work Session: Rapid Training

After reviewing and validating the data collected, the Bradford Networks engineer will show your staff how to use Network Sentry/Analytics to full advantage. Training includes features and capabilities, navigating the user interface and creating reports that help you make better decisions about your network. You'll also be introduced to our vcustomer portal and on-demand content modules that provide ongoing learning opportunities.

Day-to-Day Management: Putting the Data to Work

After the second Work Session, the engineer will transition the daily operation of Network Sentry/Analytics to your designated IT staff and introduce you to your support team

KEY DELIVERABLES

» Provisions your Network Sentry/Analytics account in the cloud
» Gathers and analyzes initial data about network usage
» Trains your staff how to use the features and functions
» Creates actionable reports
» Ongoing support

GET VALUABLE INSIGHTS FOR LONG TERM BYOD PLANNING

» Network usages trends
» Hosts, devices and connection information
» Endpoint and device Inventory
» Endpoint compliance
» Network anomalies and potential threats
» No infrastructure investment or management overhead

Bradford Networks offers the best solution to enable secure network access for corporate issued and personal mobile devices. The company's flexible Bradford Networks platform is the first network security offering that can automatically identify and profile all devices and all users on a network, providing complete visibility and control. Unlike vendor-specific network security products, Bradford Networks provides a view across all brands of network equipment and connecting devices eliminating the network blind spots that can introduce risk.
